

Spain eRetail SEO

What we learned by reverse engineering the search algorithms for three of the top retailer websites in Spain.

Optimising your products for search is essential for winning shoppers online and boosting sales. However, it's easy for brands to waste time and money over-engineering their content for search optimisation.

Using our daily digital shelf data and advanced mathematical modeling, Profitero reverse engineered the algorithms for the three major Spanish websites.

Doing so allowed us to isolate the content factors that most influence search rank performance, specific to each website.

Profitero's research shows that not all content changes have equal search impact across every retailer. Therefore, it's important to have a targeted SEO strategy — one that uses advanced analytics to predict retailer outcomes in advance.

I. Which SEO strategies work best for different retailer websites?

● **Highly correlated** (with higher search ranking) ● **Somewhat correlated** ● **Not correlated** (and may have negative impact)

	# of reviews	# of images on product page	# of times keywords are mentioned in title	product's average star rating	# of characters in product title
Amazon ES	Highly correlated	Somewhat correlated	Highly correlated	Somewhat correlated	Not correlated
Carrefour ES	Highly correlated	Highly correlated	Somewhat correlated	Not correlated	Not correlated
El Corte Ingles	Highly correlated	Highly correlated	Highly correlated	Somewhat correlated	Not correlated

II. What search-optimized content looks like by retailer

By retailer, we identified product content attributes that had the highest probability of improving search ranking on specific retailer websites. This is just a sample of our data for the retailers we studied. Profitero can create a similar SEO reverse-engineering analysis for any retailer you're focused on.

Product content attribute	Benchmark to aim for	Benchmark to aim for
Product title	<ul style="list-style-type: none">Mention most relevant search term 1 timeTitle of ~106 characters in length	<ul style="list-style-type: none">Mention most relevant search term 1 timeTitle of ~57 characters in length
Image count	<ul style="list-style-type: none">6 images	<ul style="list-style-type: none">2 images
Review count	<ul style="list-style-type: none">Best-performing products had 2,238+ reviews	<ul style="list-style-type: none">Best-performing products had 4+ reviews
Avg star rating	<ul style="list-style-type: none">4.4 stars or higher	<ul style="list-style-type: none">4.4 stars or higher

Product content attribute	Benchmark to aim for
Product title	<ul style="list-style-type: none">Mention most relevant search term 1 timeTitle of ~69 characters in length
Image count	<ul style="list-style-type: none">1 image
Review count	<ul style="list-style-type: none">Best-performing products had 17+ reviews
Avg star rating	<ul style="list-style-type: none">4.5 stars or higher

Methodology

To produce this report, Profitero analysed six weeks worth of search placement and content data, collected daily across the retailers' websites (2.2 million instances on 529 keywords).

Dates for the data analysed: 21 Dec 2021- 1 Feb 2022

Placement and content data were cross-referenced, matching products appearing on search results with their respective product content. The correlation between content and search placement allowed us to understand attributes that may cause a product to rank highly on a retailer's website. For the purpose of this initial analysis, we only examined the impact that content has on search. Other factors such as price, promotional activity, availability and sales history may also contribute to the retailer's search performance.
