

Line Item Receipts to Improve Cost Recovery

Individual PDF receipts customized for your imaging system with the press of a button.

Automatically Create and Link PDF Receipts for All Transactions

Imaging Receipts is a feature within PS/Invoice that automates the creation of an individual PDF receipt from multi-line, multi-disbursement invoices. Each receipt can be customized for import into your imaging system and is linked to a corresponding transaction in your financial system.

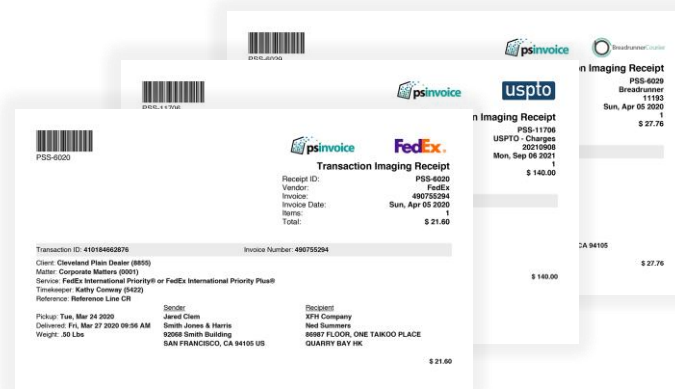

- Automatically generate client receipts as images (PDFs) for every charge to document expenditures.
- Image receipts of individual transactions can be automatically attached as support – especially valuable when collecting recoverable costs or for audit support.
- Cost level and voucher level receipts can be generated.

Eliminate Time Spent Generating Receipts

No more searching through invoices and redacting unrelated data to generate cost backup. Billing image receipts are automatically generated and uploaded to your financial system for every transaction.

With image receipts, your finance team has the support it needs to properly allocate costs and recover client charges.

Barcoded and tailor-made for your imaging system

Individual receipts per transaction, no redaction required

“We were able to reduce hundreds of hours spent poring through invoices trying to match charges to projects. And our clients appreciated the visual receipt describing the charge which led to hassle-free cost recovery.”
