

# Shipping & Invoice Management Software for the Modern Workplace

Easy-to-use, end-to-end solution that makes shipping, invoice processing and package tracking faster, easier and less expensive.

At PS/Ship, we understand the challenges of these workflows — users and accounts must be managed, multiple invoices must be processed each week and inbound packages must be accounted for and delivered. All of these are typically tedious and time-consuming manual tasks. And none of them are the best use of your staff's time. It's our mission to make the entire shipping process easier for our customers while saving them time and money.

PS/Ship is a single platform for managing your organization's shipping needs from the basics of outbound label creation and inbound package tracking, to fully integrated carrier invoice processing — uniting the front and back office workflows.

The solution prioritizes integration and security, connecting with your existing business environment and using Single Sign-on (SSO) to enforce accountability. Integrations with contact management systems, your HRIS and financial systems and the carriers eliminate friction throughout the process.

An intuitive interface guides users through the shipping process, helping them make better shipping choices and ensuring they provide important billing and cost allocation codes. The finance team reaps the benefit of automated invoice retrieval,

# 30%

**Save 30% on your total cost of shipping** through labor savings, improved cost allocation and informed shipping choices.

distributed invoice review and tailored data exports for seamless loading into your financial systems.

For over a decade we've been delivering significant cost savings, efficiencies and insights to our customers, which include top Am Law firms, leading professional service and consulting organizations and Fortune 1000 corporations.

Let us do the same for you.
