Enable a secure and central Identity for your Cloud app users with Surge Identity IDaaS

48Software is a Cloud Development Team that simplifies application delivery through agile cloud development. The 48Software team takes advantage of cloud components and Surge Identity to develop Secure apps with a trusted identity authorization provider.

48Software, Surge Identity™

Surge Identity is a cloud identity provider solution that enables secure sign in, using trusted identity and social providers and secures app-to-app communication using the latest industry security standards.

Why Surge Identity™ ?

- Reduce Development Time
- Ensure Data Security
- Centralised App Security

Build Apps

Securely sign in your users via trusted identity and social providers.

OpenID Connect Compatibility

Surge Identity is compatible with your social media accounts and all OpenID Connect identity providers.

This allows for an effortless sign in flow and optimal user journey.

Pre-Built Framework

A pre built-in framework that ensures cloud identity in a secure manner

Industry Security Standards

Using industry standards from solutions such as Identity Server and Azure AD to enable interoperability within apps.

Compliant with OAuth 2.0 and OpenID Connect standards.

Developer Friendly

Reduce Development Time with centralised app security

App and API Security

Provides customers access to your applications with trusted data security standards using our swagger compliant SDK.

Able to secure both front-end applications and backend APIs.

“Azure’s Cloud Components have allowed us to build Surge Identity to fast track our customers’ go-to-market, by providing the fundamental identity components that enable core app security” – Andre Witte, CIO, Nebula
